

IN THE CLAIMS:

1. (previously presented) A fuel feed unit for delivering fuel, having an electric motor, an electric motor stator ring, magnet shells arranged inside the stator ring and a motor casing to accommodate the stator ring, characterized in that a one-piece body (19, 19', 19'', 19''', 19''') comprises the stator ring (8) and an adjoining component of the motor casing (9) and/or of the magnet shells (10).
2. (previously presented) The fuel feed unit as claimed in claim 1, characterized in that the one-piece body (19, 19', 19'', 19''', 19''') is produced from plastics with ferrite bonded therein.
3. (currently amended) The fuel feed unit as claimed in ~~at least one of the preceding claims~~ claim 2 characterized in that the plastic is polyphenyl sulfide.
4. (currently amended) The fuel feed unit as claimed in ~~at least one of the preceding claims~~ claim 1, characterized in that a casing part of a feed pump (2) for delivering fuel in a fuel tank is produced in one piece with the body (19'', 19''').
5. (currently amended) The fuel feed unit as claimed in ~~at least one of the preceding claims~~ claim 1, characterized in that the body (19', 19''', 19''') comprising the stator ring (8) has a flange (20) for joining to a connection piece (7) intended for the connection of a fuel line.
6. (currently amended) The fuel feed unit as claimed in ~~at least one of the preceding claims~~ claim 1, characterized in that the body (19'', 19''') comprising the stator ring (8) has a bearing (18) for the rotor (4).
7. (currently amended) The fuel feed unit as claimed in ~~at least one of the preceding claims~~ claim 1, characterized in that the body (19'', 19''') comprising the stator ring (8) is joined in one piece to a component having a duct (17) of the feed pump (2).
